

Educational Objectives

This half-day course has been designed to enhance the knowledge of emergency, urgent care and immediate care providers in the evaluation and treatment of musculoskeletal trauma. Cases taken directly from the emergency department will be broken down into the essential issues that guide management with a focus on best practice.

We see patients once in the ED or clinic, but they will live with their injuries beyond that single encounter. That's why our faculty draws from all steps in the clinical course: emergency medicine, orthopedic surgery, neurosurgery, and physical medicine-rehabilitation.

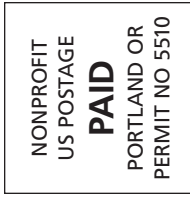

Join us for the Northwest's premier conference on emergency orthopedics.
